

FlexWall®

FW155/2 -(H34)

Volumetric and gravimetric

General Information

The FlexWall® [FW155/2](#) feeder is ideal for poor or difficult flowing bulk ingredients. The feeder has the following main components: a stainless steel rectangular housing, a flexible polyurethane trough with a large trough cross-section, massage paddles with separate drive, a screw, a screw tube, a 3 phase motor and a extension hopper with volumes of 600 dm³ (21.19 cuft) or 1000 dm³ (35.31 cuft).

The shape of the trough and the external adjustable amplitude massage paddles work together to provide consistent screw filling and mass flow without ingredient deterioration. The [FW155/2](#) features a separate paddle drive to allow paddle speed adjustment for difficult flowing ingredients.

Screw removal of the FW155/2 is from the front.

The FlexWall® is easily disassembled for wet or dry cleaning as the polyurethane trough that is attached to the housing is easily removed.

The gravimetric version includes the [H34 weighing system](#) featuring a high resolution digital load cell with serial data transmission and advanced filtering technology.

The unit conforms to CE directives.

Model Specification

Control Modules

Control and speed modules are offered either mounted onto the feeder ([Congrav® CM-E](#)) or are available for mounting in a separate control panel ([Congrav® CB-E](#) or [Congrav® CB-S](#)).

Controls can communicate directly to most host/ PLC systems or to Brabender Technologie Congrav® Operator Interfaces.

* Theoretical values at 100% screw filling level and motor speed. Depending on the flow characteristics the screw filling level may decrease to 50%. Further limitations have to be considered for gravimetric feeding, as max. speed should be reduced to allow for bulk density variations.
